Instruction of how to set up git to work on RStudio

First of all, You have to create tab called “git” File > New Project > Version control> New Directory>Create Directory that is named by you (any name is acceptable) Soon new window of RStudio will be open and you can see the tab called “git” on that

Second, Create your branch on “LearningRepository” 1. Click Creation Branch 2. And fill in branch name and click Add Remote 3. Fill in RemoteName (same one as branch name) and Remote URL. You can get URL from green code button on LearningRepository. 4. Click create and branch that you named appears on the right upper side.

If you done, you can upload anything on your branch on Github
